

## String Variables

**OBJECTIVE:** Write a program that stores the String values:

**“This is a String”**

and

**“this is too”**

into two variables of type, String.

Display the two string variables as showing in the image below.

```
This is a String and this is too!
```

**GRADING:** (15 points total)

Points	Objective
2	Empty shell – Program compiles and runs without any errors.
5	Program simply displays the text shown above correctly, but no variables were used.
7	Program does NOT display the text shown above correctly, but at least one String variable was setup correctly.
9	Program does NOT display the text shown above correctly, but both String variables were setup correctly.
12	Program displays the text shown above correctly, except for a few formatting errors, and both String variables were setup correctly.
15	Program displays the text shown above correctly, without formatting errors, and both String variables were setup and used correctly.
